# SMART FRIDGE 24/7

Pushing retail technology to the  
next ground-breaking level

The evolution of vending machines has taken a remarkable turn with the emergence of Smart Fridge Vending Machines, a trend that promises a multitude of advantages over traditional vending systems.

# Effortless Re-Stocking

The flexibility in product variety and quantity is a stand-out feature of Smart Fridge Vending Machines. Unconstrained by packaging limitations and devoid of the risk of product jams, these cabinets offer a versatile platform for vending an extensive range of items.

## Enhanced Shopping

No lines, no cashiers and no product scanning; customers can quickly and easily purchase multiple items of various types in one transaction, by simply activating and opening the fridge, mirrors the simplicity of accessing items from your own fridge. This seamless convenience elevates consumer satisfaction and subsequently drives higher sales figures.

**The Smart Fridge Vending Machine represent a significant shift in the vending landscape, aligning with modern consumer's expectations and preferences.**

The fusion of convenience, affordability, and variety underscores their potential to reshape the industry. As the vending industry witnesses a transformation propelled by technological innovation, Smart Fridge Vending Machine stand at the forefront of this evolution. They embody not just a shift in functionality but a paradigm shift in the very essence of vending experience.

## Your Fridge Away from Home

### Activate Payment

All you have to do is swipe or tap your card; or activate your digital wallet using your smartphone.

### Open Fridge Door

Once your payment method has been verified, the fridge door will unlock and you can open it.

### Take Your Items

Grab your products. The weight of each item being removed triggers a cost amount that will be charged.

### Check List & Go

Check the screen to see your list of items that will be charged to your account once the door closes.

# Secure Vending

Smart Vending Machine Fridge is pioneering at-shelf buying and inventory management solutions for grocers, sports stadiums, pharmacies, airport kiosks, offices, hospitals, schools and more. With the Smart Shelves and NFC-based technology, organizations customise applications such as in-aisle checkout, in-office convenience stores, modern-day vending and stocking management solutions, all powered by tap and-go access and payment processing.

Forget lines and checkout counters; shopping and stocking with Smart Vending Fridges is convenient, flexible and easy, helping organizations strengthen customer loyalty, increase shopper conversion rates, and better control inventory.

High-tech coolers unlock opportunities and freshen up semi-public areas. Everyone is constantly on the go and convenient technologies in places where we need them the most have become mandatory in this new decade.

The SPAZA Smart Vending Fridge 24/7 (SSVF) provides operators with the opportunity to grow into semi-public areas, such as hotels and malls, and provides them with controlled cooler access—reducing theft and offering a worry-free cooler with temperature control.

The SSVF provides you with the opportunity to grow into semi-public areas, add a controlled cooler to your new and existing locations or complete your Connected Campus with modern cooler technology. Provide your customers instant access and payment ease by giving them the ability to use a variety of payment options. Once items are selected, customers simply scan the items and easily select checkout on the interactive SSVF screen.

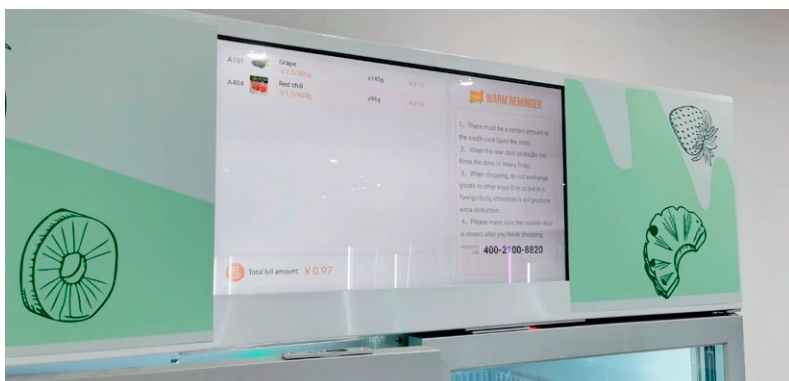

## Food and beverages are secured and safe

The SSVF remains locked until the user opens it, either through payment with a debit or credit card or via Apple Pay, Google Pay app. This protects food and beverage items from

theft, enabling operators to place the SSVF in high-traffic or semi-public facing areas, opening up a new range of opportunities for accounts. The secure locking function also keeps products properly refrigerated, reducing the risk of spoilage and revenue loss.

## Display Screen

The SSVF's sleek, compact screen doesn't take up much space, but it has a large enough display to run advertisements, giving operators the ability to interact with users and push customised promotions to customers. Use this valuable screen time for co-branding with suppliers, or to display product information such as nutritional facts or pricing. This powerful marketing tool enables operators to influence customer purchasing behaviour and strategically drive product sales, resulting in increased revenue.

# Smart Features

## Low cost.

Energy save, low cost
